

# Wellness Checkpoint® Speaks Your Language

Wellness Checkpoint is the Global Leader for Health and Business Risk Management

25+ Years, 100+ Countries, 26 Languages + 8 Regional Variants

Wellness Checkpoint is available in nearly all official and secondary languages worldwide.

Your participants can take the assessment and see their results in their preferred language. Your custom content and some group reports can also be presented in any of the languages.

Western European Languages		Central & Eastern European Languages		Asian Languages		Middle Eastern Languages	
English	1990	Czech	2011	Chinese (simplified)	2006	Arabic	2012
Danish	2001	Polish	2003	Chinese (traditional)	2012	Hebrew	2008
Dutch	1995	Romanian	2012	Hindi	2012		
French	1991	Russian	1997	Indonesian	2012		
German	1995	Turkish	2012	Japanese	2012		
Italian	1996	Ukrainian	2012	Korean	2009		
Portuguese	2002			Malay	2007		
Spanish	1993			Thai	2011		
Swedish	1999			Vietnamese	2012		

# Wellness Checkpoint Regional Language Variants

Wellness Checkpoint provides dynamic language adaptation based on the country or region from which the participant is accessing Wellness Checkpoint during their session. Wellness Checkpoint recognizes where the participant is entering from and automatically adjusts to present the appropriate variances to that participant.

Some examples of these variances include:

## ✓ Terminology (local customs, foods, cultural differences)

For instance, participants taking the assessment in English would be asked if they:

- smoked cigarettes or bidi (India)
- consumed full fat milk (UK) or whole milk (US and Canada)
- ate “pulses” (UK), legumes (US, Canada), “dal” (India) or mung, adzuki or hyacinth beans (East Asia)
- have had a “flu jab” (UK) or a “flu shot” (US and Canada)

## ✓ Units of Measure

Participants from the UK would be asked to input their alcohol consumption in “units” rather than in “drinks” as used in US and most other countries (the different measures of alcohol are then normalized within the alcohol risk algorithm so that determination of risk is consistent). Metric or Imperial units of measurement will present to the participant as appropriate or as selected by the participant.

## ✓ Spelling

Participants from the US would see “fiber”, “counseling” and “hemoglobin A1c” while those from the UK would see “fibre”, “counselling” and “haemoglobin A1c”.

This means:

- your French speaking population in France and Canada;
- your Spanish speakers in Mexico, Argentina and Spain;
- your Portuguese employees in Brazil and Portugal and
- your English speakers in the UK, the US, Canada, India and East Asia

will automatically experience Wellness Checkpoint in the way that makes the most sense to them - **all within the same global application.**
